

Help them get the best start in life

Introducing Periflex Infant, the newest addition to the Periflex family

Periflex Infant is the only PKU infant formula fortified with Docosohexaenoic Acid (DHA) and Arachidonic Acid (ARA). DHA and ARA are important in brain and eye development.

Along with the important advantage of DHA and ARA, **Periflex Infant**:

- Has more protein per calorie than XPhe Analog
- Is easy to mix (no clumping!)
- Provides an easy transition to Periflex Junior

Your local sales representative will contact you soon to discuss all the benefits of **Periflex Infant**.

Please note: The product and reimbursement codes for Periflex Infant are the same as those for XPhe Analog.

Please call 1-800-365-7354 for more information.

Sincerely,
The Nutricia Metabolics Team

The Periflex family – grow along with us
